# Chapter 1

## README

#C Program Examples#3

These are some C program examples from my course on systems programming ([CS2014](#)), the canonical URL for this is [here](#).

### Files in this example:

- README.md - this file in markdown format
- README.html - this file, in HTML format ( 'make html ' to update that from .md)
- [Makefile](Makefile) - to build the example and HTML (there's a clean target too)
- [refman.pdf](#) - doxygen automated documentation from javadoc comments
- [str-dox](str-dox) - doxygen config file
- [sizes.c](#) - play program to see sizes and similar

After running 'make ' then these files will be produced (if all goes well):

- README.html - the html version of README.md
- sizes - the binary for sizes.c

## Chapter 2

# Class Index

### 2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">_finfo</a>	Mess about with struct and union and see how big things are . . . . .	<a href="#">5</a>
<a href="#">_ufinfo</a>	. . . . .	<a href="#">5</a>

## Chapter 3

# Class Documentation

### 3.1 `_finfo` Struct Reference

mess about with struct and union and see how big things are

#### Public Attributes

- char \* **name**
- char \* **link**
- char **isdir**

#### 3.1.1 Detailed Description

mess about with struct and union and see how big things are

a file-info like structure

The documentation for this struct was generated from the following file:

- sizes.c

### 3.2 `_ufinfo` Union Reference

#### Public Attributes

- char \* **name**
- char \* **link**

#### 3.2.1 Detailed Description

a union that could be a name or a link (not useful really:-)

The documentation for this union was generated from the following file:

- sizes.c
